The Hydrapen Hype

What does the Hydra Pen do?

The Hydra Pen combines the functions of *micro-dermabrasion* – a type of skin exfoliation and *mesotherapy* – the injection of serums, vitamins, enzymes, etc to rejuvenate the skin.

Like any micro-needling device, the nano-needles in the Hydra Pen produce micro-damage to the epidermis, stimulating the production of collagen and elastin and enhanced cellular renewal.

What makes this device special?

Answer: the needle cartridge!

The Hydra Pen cartridge houses 12 nano needles as well as a hollow “capsule” (reservoir) into which treatment serum is poured.

When the pen is in operation, the needles form channels in the skin, which provides for the penetration of more than 80% of the product into the skin (with regular application, only 3-5% of the product is absorbed).

The needle cartridge operates at a frequency of between 3000 and 5500 punctures per minute, allowing the serum to penetrate directly and quickly into the skin. The resultant minute skin injuries activate enhanced skin regeneration and renewal.

How is it used?

Hydra Pen can be used for *cosmetic needling* with any serum of the client's choice. This means that active serums (e.g. Vit C which helps with scarring and pigmentation) can now be safely and effectively introduced at a 0.25 mm needle depth setting. Due to working at this depth, treatment can be repeated more often (weekly).

Hydra Pen is also used for *traditional collagen induction* (micro-needling) where serums are infused at between 0.5 and 2.5 mm depth, depending on the area treated. Micro-needling treatment may be repeated after 4 – 6 weeks.

How can I benefit from a Hydra Pen treatment?

The following can be treated successfully-

- dull skin
- acne scars
- pigmentation
- fine wrinkles
- enlarged pores
- stretch marks

What are the costs?

Sessions start at R800 and include an aftercare product and LED therapy.
